

Harvard Undergraduate Science Olympiad India 2024 Open Round Chemistry (7th-8th Grade) Syllabus

Reference Material:

You should memorize common formulas and reactions, but you need not memorize any constants as a periodic table and all needed constants will be provided (**see the provided formula sheet at the end of this document**). **You will be allowed a non-programmable, non-graphing calculator, like in the open round.**

Potential Topics Covered on the Exam:

Please note that not necessarily every topic on this list will be on the exam, don't get overwhelmed! The syllabus is meant to be exhaustive of all *potential* topics that could be on the exam. A great place to start is with making sure you're comfortable with the ICSE curriculum for 7th-8th grade. It will be a difficult exam, but remember you don't need to (nor do we expect you) get a 100%! Just do your best and show us all that you've learned! Good luck and happy studying!

The format of the exam will be long form free-response questions. We will not ask you to write out explanations in words, but rather do calculations, draw molecules, and answer multiple choice questions. IChO (International Chemistry Olympiad) and InChO (Indian Chemistry Olympiad) are great to see exam format (NOTE: our exam will be much shorter and MUCH easier). IChO and InChO are exams that are for the best high school students in the country/world, so these exams should really only show you what the style of answers (e.g. calculations, checking boxes, etc) that our test will have. **There will not be organic chemistry tested in the 7-8th grade exam.**

For calculations, all work must be shown to receive full credit. Partial credit will be given on questions in the exam. No penalty for incorrect answers. The exam will be 1 hr in length.

Advanced Topics:

This syllabus contains topics which might be covered in the in person round. This syllabus is similar to the one provided for the open round, however there will be more questions on the topics that were formerly red and some questions may be short answer response. The exam will have questions testing a subset and not all of these bullet points in this extensive list of topics in the syllabus. We wish you a lot of good luck studying!

Inorganic Chemistry:

- Periodic Table:
 - Elements classification;
 - Main group elements;
 - Transition group elements;
 - Isotopes:
 - Atomic number;
 - Mass number;
 - Relative atomic mass;
 - Radioactive decay and nuclear reactions (alpha, beta, gamma);
 - Electronic configuration of atoms and their ions:
 - Quantum numbers (n,l,m);
 - Orbital types (s,p,d);
 - Hund's rule,
 - Pauli principle;
 - Trends:
 - Trends in electronegativity;
 - Trends in electronaffinity;
 - Trends in reactivity;
 - Trends in metallic and nonmetallic character;
 - Trends in atomic and ionic size;
- Chemical Bonds:
 - Bond Types;
 - Hybridization;
 - VSEPR theory;
 - Shapes;
 - Polarity;
 - Bond Angles;
 - Solid State Chemistry:
 - Unit Cells;
 - Metallic Bonding;
 - Water of hydration;
 - Oxides (acid and base properties);
- Chemical Reactions:
 - Reaction types;
 - Balancing reactions;
 - Empirical formulas;
 - Stoichiometric calculations:
 - Concentrations;
 - Mole concept via volume, mass and number of atoms;
 - Oxidizing and reducing agents, identifying and predicting;

Analytical Chemistry:

- Solutions:
 - Different concentration measurements (molarity, molality, etc.)
 - Self ionization of water;

- Hydrolysis of salts;
- Acidity and Basicity:
 - Arrhenius acid-base theory;
 - Bronsted acid-base theory;
 - Lewis acids and bases theory;
 - pH and pOH definitions;
 - K_a and K_b as a measure of acid and base strength;
- Colligative Properties;
- Quantitative Analysis:
 - Acid-base titrations;
 - Oxidation-reduction titrations;
 - Precipitation titrations;
 - Combustion analysis;
- Qualitative Analysis:
 - Flame tests;
 - Specific identification reactions for common cations and anions;
 - Solubility of Compounds:
 - Soluble, slightly soluble, and insoluble salts;
 - Working with solubility constants;
 - Saturated, unsaturated, and supersaturated solutions;

Physical Chemistry:

- Equilibrium:
 - Le Chatelier's principle;
 - Phases:
 - Ideal gas law;
 - Clausius-Clapeyron equation;
 - Phase diagrams;
 - Boiling point elevation and freezing point depression;
 - Equilibrium concept:
 - Equilibria expressed in terms of relative concentrations;
 - Equilibria expressed in terms of partial pressures;
 - Relationship between equilibrium constants and Gibbs' free energy;
 - Relationship between equilibrium constants expressed via concentrations, pressures, and mole fraction;
 - Solubility product;
 - Relevant calculations;
- Kinetics:
 - Reaction rate:
 - Order of reactions;
 - Equations of reactions;
 - Reaction rate constants;
 - Rate Laws;
 - Reaction energy profiles;
 - Relation between half-life and rate constant;
 - Steady-state approximation;

- Relevant calculations;
 - Factors influencing reaction rate:
 - Catalyst effects;
 - Concentration effects;
 - Temperature effects;
- Thermodynamics:
 - First law of thermodynamics:
 - Energy, heat and work;
 - Systems and its surroundings;
 - Second law of thermodynamics:
 - Entropy and standard entropy changes;
 - Enthalpy and standard enthalpy changes;
 - Standard enthalpy of formation;
 - Standard enthalpy of phase transitions;
 - Enthalpy changes for bond dissociation;
 - Hess's Law;
 - Gibbs' free energy and standard Gibbs' free energy changes;
 - Relationship between entropy, enthalpy and Gibbs' free energy;
 - Relationship between equilibrium constants and Gibbs' free energy.

Laboratory Skills:

- Choosing appropriate materials for common lab task;
- Identifying correct procedures for common lab tasks;
- Error analysis.

Preparation for Exam:

The Byju's website provides examples of textbooks as well as problems with their solutions which can be used to study for chemistry competitions. Also, the following book which can be found online covers good fundamentals: General Chemistry Hardcover by Darrell Ebbing and Steven D. Gammon.

Note that none of these books are required to prepare for the exam, nor are they the only way possible to prepare. Reviewing past ICSE Chemistry papers and solutions is recommended for preparation. We expect the difficulty and style of the questions in this exam to resemble those of the questions in competitions like ICSE with more creative thought or calculations or INJSO with. **There will be some difficult questions that will challenge even the brightest of students, so don't get discouraged while studying!**
